

# The Danish Roadbook

## Updating GPX files and routes on GoogleMap

The routes have been known by you for quite some time. I have asked you to report bugs and opportunities for improvement. I have worked intensely with the routes and maps.

The result is that I have made small adjustments on some routes.

### AM-1 Milan Del Duomo to Gap

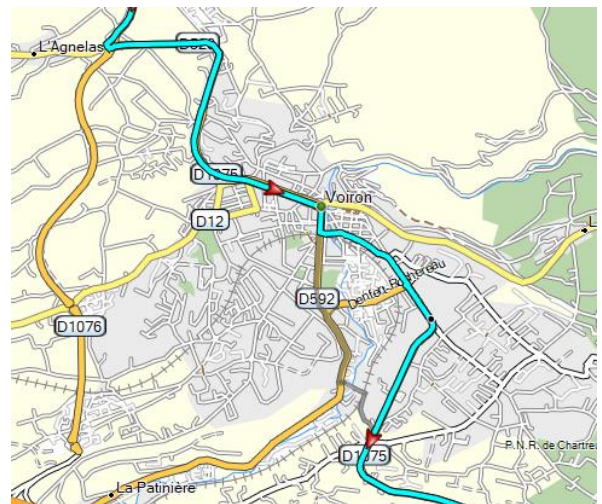

Thanks to an attentive participant, an error on the concentration route from Milan to Gap has been revealed at 150 km. It will not be a disaster to use the original GPS route, but it is best to use the new GPS route. Below you see the difference – gray is the wrong way.

### A2 Langres to Saint Andre les Alpes

15 km before Grenoble on the concentration route from Langres, there is an adjustment on the route through the town of Voiron.

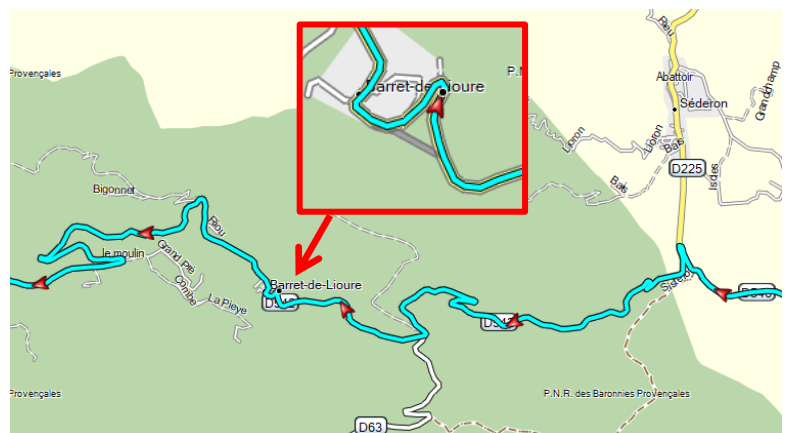

You will probably not notice any problem using the original GPS route. On this map, you see the difference – gray is the wrong way.

### RB 1-1 Monaco to CH Buis les Baronnie

15 km before SR 2, Col des Aires passes a small village, Barret de Lioure. The original GPS route was the shortest route, but you must pass the village on the D542.

On the map you see the difference

**I have not found any other discrepancies.**

**In general, follow the roadbook if a difference occurs**
